## ■ INVESTMENT OPPORTUNITIES / SATELLITE IMAGERY

**Investment Methodology:** Our analysis combines satellite-detected land use changes with market intelligence and infrastructure data. Each region receives an **investment score (0-100)** based on:

(1) **Development Activity** - volume and pace of land use changes detected via satellite, (2) **Infrastructure Quality** - proximity to major roads, ports, airports, and active construction projects, (3) **Market Dynamics** - property price trends and real estate market heat.

**Confidence Levels:** Each score includes a confidence percentage (20-90%) that reflects data completeness. Higher confidence means we have real-time market data, detailed infrastructure analysis, and high-quality satellite imagery. Lower confidence means we're relying primarily on satellite-detected changes with limited market/infrastructure data. Typical confidence is 40-60% during early analysis phases.

**Imagery Notes:** Satellite imagery shows before/after comparisons where available. NDVI (vegetation index) maps highlight **vegetation loss (red)** indicating land clearing for potential construction sites, and **vegetation gain (green)** showing revegetation.
